Sir:

In response to the Office Action of March 28, 2002 Paper No. 5), please amend the above-captioned application as follows:

IN THE ABSTRACT:

Please amend the Abstract of the Disclosure as follows:

Α magnetic bearing device includes a pair of electromagnets holding a rotary body at opposite sides thereof in the direction of each of control axes, a detector for detecting the position of the rotary body, and an electromagnet controller having an integral operation unit for controlling the electromagnets based on the result of detection of the position. The electromagnet controller sets as a target levitated position of the rotary body the position of the rotary body corresponding to the median of an integral output of the integral operation unit when the rotary body is magnetically levitated in the vicinity of one of limit positions
